

# ---LE'VZ 200/300 OOP.---

MARCH 1985. #11 \$1.00.

J.C.E.D'ALTON.

## BonJoi computing friends (OOPs)

I have been asked what is the difference between the Software Short list and a long list. I have used the short list format in the last couple of LE'VZs to allow more space for other items. The Long List is about two Pages long, giving a very brief description of each item of software. I will print a Long List in Perhaps # 12 issue.

Please note that back issues of LE'VZ are now \$1.50 each. I keep on getting requests for back issues, which is quite time consuming in that I have to set up the masters again to copy just a few. If you are waiting on back issues, Please be Patient. If you do not receive them with your regular/ present issue or within a month or so, Please remind me.

I would like to hear from OOPs or friends who have the Disc System. Are you having any trouble with it at all? Larry Taylor did have a Problem with his after a few days of Purchasing it. I have not had any trouble at all "touch wood", and it gets plenty of use as you might imagine with my D'BASIC development. I have heard of one case of a Commodore drive actually chewing up discs. Have you had Problems because you have travelled in electric trains or trams while carrying discs?

An interesting letter from Grant Calboun of Eungai Creek, (in NSW but where in NSW) arrived in December. Grant has a farm and has not the luxury of 240 volt Power from the NSW Grid. He has a 36volt battery which is charged by a Petrol (soon steam) driven generator.

So he has a 36v bus, a 12v bus, and a 240v inverter driven bus. Bus meaning LINE not Passenger bus. He has two Disc Drives which were not operating at the time, because of voltage regulation Problems. Perhaps Grant you may like to let me know how you are going now in this regard.

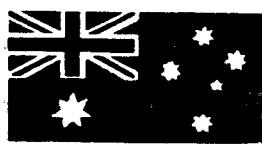

Grant sent me his contribution of his system interfaced with the "CHATTERBOX" speech synthesiser from E.T.I. Jan 1985. See Page 6 .

I trust that you can read the reduced Pages OK, as I am now getting more contributions, it's the only way of confining LE'VZ to 10 Pages. I was going to include another listing of VZ items as contributed by Mr. Bob Kitch, but again space does not permit it. He has about another 60 items, to add to the LE'VZ #10 list. Remember to communicate directly to Bob.  
Mr.R.KITCH, 7 EURELLA ST., KENMORE, QLD. 4069.

Please let me know what you would like printed in LE'VZ. In Particular we Aussies would like to hear from our Kiwi friends.

Well that's it for now. Marie and I wish you all the best of God's blessings for another special time of the year, EASTER.

ADVENTURE by Scott LeBRUN

continued from ENV #10.

# PROGRAMMING HINT : - LISTING.

To <LIST> or <LLIST> when running a programme, <LIST> or <LLIST> will list last line operated on before <BREAK>ing. <LIST> - <RETURN> will list from that line to end of programme. <LIST> - <RETURN> will list from start of programme to that line.

## USING THE OUT PORT by Mr. Scott LE BRUN.

I have been experimenting with the <OUT(X),Y> command in conjunction with a GP100 Printer. Outputting to Port # 0 stores the # in the output buffer and then releases it all with the <LLPRINT> command.

The # to be sent is the ASCII equivalent of the character you want printed. It is possible to create strings of characters in the same manner by repeating the process with characters. E.I. if you want to print "HI" type in immediate mode:-

```
OUT(0),72  (72 ASCII - H)
OUT(0),73  (73 ASCII - i)
```

Type in these two short programmes.

```
10 FOR I=1 TO 16      MAKE SURE GP100 PRINTER IS
20 READ A
30 OUT(0),A
40 NEXT
50 A$=INKEY$
60 A$=INKEY$
70 IF A$="" THEN 50
80 LPRINT
90 END
100 DATA 76,69,39,86,90,50,48,48,47,51,48,48,32,79,79,80
```

```
10 FOR I=123 TO 191    ENSURE THAT GP100 PRINTER IS
30 OUT(0),I
40 NEXT
50 A$=INKEY$
60 A$=INKEY$
70 IF A$="" THEN 50
80 LPRINT
90 END
```

BELLOW IS RESULT OF THE PROGRAMME  
RUN THREE TIMES.

```
(1) ~ ddddeeeee#0B^DH$AAB60000.0$F$↑↓↔↔
(1) ~ ddddeeeee#0B^DH$AAB60000.0$F$↑↓↔↔
(1) ~ ddddeeeee#0B^DH$AAB60000.0$F$↑↓↔↔
```

## NEW SOFTWARE.

### WORD SQUARES by Mr. John Ramsden.

This is a VZ version game seen in many magazines and papers.

You select the words and the VZ "hides" them in a square of letters. You find the words which are hidden either vertically, horizontally or diagonally. A print out of the entire maze or only of your chosen words is possible. A very interesting game.

FROM CRAIG MUNNER - PERTH.

## JOYSTICK DRAWER

```
10 MODE(1)
20 X=0
30 Y=0
40 A=(INP(43)AND31)
50 IFA=23ANDX<127THENX=X+1
60 IFA=27ANDX>0THENX=X-1
70 IFA=30ANDY>0THENY=Y-1
80 IFA=29ANDY<63THENY=Y+1
90 SET(X,Y)
100 GOTO 40
```

## HI-RES GRAPHICS GEOMETRIC PLOTTING.

### ( A PLEA FOR MORE READABLE BASIC PROGRAMS )

The following program is a simple line plotting routine using the hi-res graphics screen. It was written to try and demonstrate how programming skills can be improved by following a few simple guidelines.

Unfortunately published programs in magazines are generally poor examples of how to develop good programming style. A number of us may have taken the trouble to enter a listing from a magazine - but upon running the program have found that all is not well with the code! A long, tedious and frustrating session-of understanding the poorly constructed code, determining all the twists and turns of the 'logical spaghetti' and debugging-commences. A usual remedy is to re-write the program from scratch. Not a very efficient process!

The program below is

1. Clearly coded and set out - an enormous help in UNDERSTANDING.
2. The program is STRUCTURED - a good algorithm is selected and the program 'flows' through initialization to input, procedure and output sections.
3. Loops are indented for ease of identification and nesting.
4. Naming of variables is meaningful to assist maintenance and debugging.
5. Integer storage is used where appropriate.
6. No abbreviated forms of BASIC statements are used.
7. Remarks are liberally sprinkled throughout to aid clarity.
8. Error capture and range checking on all input variables prevents program from crashing.

Clear readable code is more important than the execution speed or storage requirements of the program - interpreted BASIC runs like a tired snail in any case!

These guidelines should lead to code that is easier to read, understand and debug. This leads to easier maintenance, updating or expansion of your routines as your programming skills develop.

```

300 REM***SET UP SCREEN AND MAIN LOOP* Switch screen to hi-res.
310 MODE(1) Initialize main loop for lines.

BASIC MONITOR FOR THE UZ200 by R.G.DAVIS

A very handy little program if you just want to experiment with machine code programming.

Enter the program and run, you will be given three choices ..

ONE..MEMOD You are asked for start and end address you then step through memory one byte at a time and are given the chance to enter new data in hex, press <RETURN> and step on to the next byte.

TWO..REVIEW displays on the screen 16 lines by 8 columns of hex data. Press <SPACE> to bring up the next 16 lines of data.

THREE..PRINTOUT use your printer to get a hex dump of your program. If you wish to have 16 bytes per line then change the end of line 9 to read..

FOR N=1 TO 16

```

30 INPUT "START ADDRESS"; M:E=M
31 IF M<32768 THEN 33 ELSE Q=M
32 GOSUB 40:M=X
33 INPUT "END ADDRESS"; E

"My name is UZ-200 Chatterbox;  
Grant is my master. Beware!  
We will drive you insane, totally  
insane! Beware! Beware! This  
message will self destruct."

THIS EXPLAINS THE WORLD TIMES  
PROG.. SENT IN BY R.DAVIS IN  
A PREVIOUS REVZ.

WORLD TIMES BY R.G.DAVIS 12 7 1984

The program starts off by asking you to input your local time then in line 12 subtracts 10 hours (for eastern time). If you live in S.A then line 12 would read.....

12 Z=H-9:0=M-30

This changes the time to Greenwich time so the only line that will ever have to be changed is line 12.....

Line 14 then checks for illegal times (< zero or > 23,59)

Line 15 then draws the map of the world. Extra cities can be added, as an example...

80 E\$="HAWAII":Z=GH-10:0=GM-30:C1=
3:C2=2:X3=5:Y3=33:GOSUB 110

To look at this in more detail..

E\$="HAWAII" Writes HAWAII in HI RES  
Z=GH-10:0=GH-30 subtracts 10 hours 30 minutes from G.M.T..

C1=3:C2=2 C1 is the contrast colour to flash the pixel C2 resets pixel to original colour..

X3=5:Y3=33 X,Y coordinates to flash the pixel.

### • • • INPUT/OUTPUT ON THE V2 • • •

By SCOTT LE BRUN OOP R27

The I/O Port of the V2 has 8 data pins labelled D0 - D7, these pins represent BITS (Binary digits). In binary a '1' is used to represent an 'ON' or 'HIGH' situation, where a '0' represents an 'OFF' or 'LOW' situation. The pins use '5V' to represent an 'ON' and a '0V' to represent an 'OFF'. To explain this further, refer to the diagram below.

For a binary equivalent of 10 decimal.

(refer to 2nd last page for conversions between the two)

D7 D6 D5 D4 D3 D2 D1 D0 - (pins)  
0 0 0 1 0 0 - (high or low)

That means that there is a 'HIGH', 5V on pins D3 and D1, while the others are kept 'LOW', 0V.

O.K., so we know that there are 8 data pins with 5V or 0V on them. Now let's look at how we can put HIGHs and LOWs on those pins and how to detect whether or not a HIGH or LOW exists on those pins.

The `<OUT(X),Y>` command outputs data to the port, where 'X' is the port number and 'Y' is the decimal equivalent of the data to be transmitted.

The `<A=INP(X)>` command reads (looks at) the port, where 'X' is the port number and 'A' is the decimal value of the data detected.

We now know how to input & output to the port.

Consider the simple experiment below.

#### SINGLE BIT INPUT

R<sub>1</sub> 220Ω

5V

When a HIGH is Put on the BASE (b), current will pass from the COLLECTOR (c), to the Emitter (e). i.e. - an electronic switch

When D7 goes HIGH, the L.E.D. will light. At all other times, the transistor will be switched off. The two resistors R1 & R2 are there just to limit the current a bit, so the L.E.D. won't expire.

Construct the circuit and type in the following:-

```
10 OUT(0),128  
20 GOTO 10
```

While the program is `<RUN>`ing the L.E.D. should light. Edit line 10 to `OUT(0),127,<RUN>` & the L.E.D. should go out.

\*\*\*\*\* NOTE \*\*\*\*\*

Note that the V2-200/300 is an 8-BIT computer therefore the highest number that can be used to input or output is:-

```
D7 D6 D5 D4 D3 D2 D1 D0  
1 1 1 1 1 1 1 1  
=> 255 decimal
```

D7 is the BIT we change.

To be continued in a future LEV2.

The highest decimal number that can exist with D7 LOW, is 127.

```
E9:- D7 D6 D5 D4 D3 D2 D1 D0  
0 1 1 1 1 1 1 1 (binary)
```

Now flick the switch (while still `<RUN>`ing), and the screen should print a number equal to or greater than 128.

```
E9:- D7 D6 D5 D4 D3 D2 D1 D0  
1 0 0 0 0 0 0 0  
1 (any other combination) >128
```

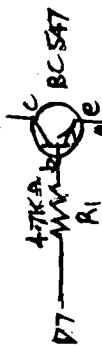

Will always be  
,1, while switched  
to ,5V.

\*\*\* NOTE \*\*\*

ALWAYS make sure that the computer is INPUTting while you change BIT values otherwise the computer will crash.

Consider the simple experiment below.

#### SINGLE BIT OUTPUT

Construct the circuit and type:-

```
10 PRINT INP(0)  
20 GOTO 10
```

`<RUN>`, The screen should be printing a number less than 128. This is because we have a LOW on D7.

```
E9:- D7 D6 D5 D4 D3 D2 D1 D0  
0 (any combination of 0 and 1)
```

While the program is `<RUN>`ing the L.E.D. should light. Therefore the highest number that can be used to input or output is:-

```
D7 D6 D5 D4 D3 D2 D1 D0  
1 1 1 1 1 1 1 1  
=> 255 decimal
```

\* \* \* SOFTWARE FOR SALE FROM VSOFTWAREZ \* \* \*

MARCH 1986.

All Prices are correct at time of printing, but may change without notice. All articles available while stocks last.

All tape software includes postage up to four tapes.

When ordering software, always state := which computer VZ200 or VZ300, if you have an expansion RAM unit, and if you have a disc drive system connected.

VZ1 = unexpanded VZ200.      VZ2 = unexpanded VZ300.  
VZ3 = expanded VZ200.      VZ4 = expanded VZ300.

TS15 = Tape only unit of B15.      DB5 = Disc only unit of B5.

T/DE4 = Tape or Disc unit of E4. The Price stated is for a Tape unit. If a Disc unit is required, add \$5.00. to the Tape Price. The Price of a Disc unit is as stated.

To allow faster service, send bank, building society, credit union cheques, or Aust Post money orders so that time is not wasted in waiting for a cheque to be cleared.

Make cheques payable to      J.D'ALTON or VSOFTWAREZ.

\* \* \* NEW SOFTWARE. \* \* \*

- DB5 LE'VZ STATEMENT V2.0. \$185.00. VZ4.  
For small business use. Based on LE'VZ D'BASE. Random access records. Requires the Disc Drive System, a Printer and VZ DTR. Process and Print end of month statement/s, labels, Pay into account etc. All money calculations carried out, IE. Debit, Paid in and Statement \$ totals. Comes with a 20 page instruction booklet. Write for more information or see a demonstration.
- D/TU12 FILESEARCH.      \$ 10.00. VZ1-VZ4.  
Reads the tape leader or disc directory to obtain the filetype, filename and start/end addresses of Basic or M/L Programmes. The Printer option will print labels.
- D/T19 COPY/PROTECT.      \$ 30.00. VZ1-VZ4.  
Incorporates two Programmes BREAKPROOF and FILECOPIER. Using BREAKPROOF on Basic Programmes Produces versions which autorun and will automatically restart, if the <BREAK> key is Pressed. FILECOPIER allows the transfer of all Basic or Machine Code Programmes to or from tape or disc.
- DU20. DISC GUARD.      \$ 60.00. VZ1-VZ4.  
DISK GUARD Prevents easy copying of Programmes stored on Disc. IE. <DCOPY> and FILECOPIER canNOT copy a DISKGUARDED Disc. Basic Programmes are automatically BREAKPROOFED to Produce an autorun Programme, which will rerun if the <BREAK> key is Pressed. That Programme canNOT be effectively listed/listed.

NEXT LE'VZ # 12

Binary - decimal conversion. Screen handling capabilities of the VZ. Bob Kitch's 2nd list of VZ items. And more.

\* \* \* FOR SALE \* \* \*

HARDWARE and FIRMWARE.

VZ Data recorder \$60.00. used. with Power Pack.  
GP 100 Printer without interface \$170.00. used.  
LASER Light Pen with System Tape \$ 75.00. New.

\$

\$

Printer ribbons for the GP100 \$11.50. each, new. These are not direct replacements, so you need to remove the axle from the original one and swap one half of the little case, worth the few minutes fiddle.  
C10 Blank tapes in lots of 5 \$1.20. each new.  
C20 Blank tapes in lots of 5 \$1.30. each new.  
5.25 blank discs SSDD in Packs of 10 new. \$25.00.

VZ200 KEYBOARD.

If you have to Press certain keys harder or a few times to get them to work, then don't throw the VZ away. Replace the whole rubber keyPad. It is the keys that protrude through the darker Panel that has the statements Printed on it. the rest of the rubber underneath joins the keys together. It is no use cleaning the Print board or the ends of the keys, as this makes matters worse.

The end of each key has a black substance (Probably Graphite) embedded into it. The resistance in OHMS must be no higher than 5000OHMS between a distance of about two (2) MM. Use sharp Probes to measure it. Anyway, the keyPad can be bought from DSE. for about \$6.00. I think they refer to it as a rubber membrane.

I must thank the staff of various Dick Smith stores in Australia for letting folk know of the existence of me LE/VZ 200/300 OOP Group. I have even received phone calls via the DSE. Hot Line in Sydney.  
THANKS ! ! !

SORRY AGAIN.

MICRO MAGIC.

I advise OOPs again of the other main VZ user group. Mr. Gordon Browell 7 Abbott Crescent MALAK. DARWIN N.T. 07993. He Prints a newsletter and now Beginner's Guide to the VEEZED. Write to Gordon for details.

SOME PAGES OF THIS ISSUE  
ARE NOT AS GOOD AS I WOULD  
LIKE THEM. BUT THERE  
IS MORE IN THIS ISSUE!!

v.o.

VZ 200 RAM EXPANSION UNIT.

by CFN P. Jackson of Glenorchy.

In the VZ200 exp unit, the wire link between 1-4 can be changed to links 1-5. If the unit is Plugged into a VZ300 the Top of Memory becomes E000H (57344 Dec). If the link is changed to 5-2, then the TOM becomes FFFFH (65535 Dec). A small switch can be fitted to select VZ200 or VZ300.

( I have not had time to try the changes or study the circuit so cannot vouch for what the contributor has sent me. At first sight it seems possible. Some OOPs may have seen Steve Olney's article in E.T.I. Feb 1986, whereby he fits an additional I/O to do a similar job. If anyone tries the above, Please let me know the results. ED. )

\* \* \* TUITION. \* \* \*

Beginners BASIC tuition is available, on a one pupil basis with hands on experience and printouts of required sections of the lesson. Contact me for further details.

P10 #11.
